

The Ascert VersaTest Automation Server Plugin for HP Quality Center Software bridges the gap between HP Quality Center and VersaTest's powerful testing solutions. This provides a seamless flow of information that adds significant value to the testing and monitoring process.

The Solution is Unique

The Ascert VersaTest Automation Server Plugin for HP Quality Center Software is not just a typical plugin module like many others that exist in the market place. The product achieves a significant level of automation, especially in validation and pass/fail marking. Furthermore, though the product is specifically geared toward automation of the testing environment, it has flexibility to be customized to extend those capabilities to virtually anything within Quality Center.

Why This is Important

The capabilities of defining tests and storing the results in Quality Center is a huge benefit. It enables the user the ability to provide instant and automatic feedback of testing results, to all levels of management, using Quality Center and the Quality Center Dashboard.

Using VersaTest Automator stand-alone reduces testing time and effort which improves speed to market, and speed at which applications can be tested to find defects that need to be corrected.

When used with the VersaTest Automation Server Plugin for HP Quality Center Software, VersaTest Automator can be controlled from Quality Center, leveraging the familiar "look and feel" of Quality Center for test definition, execution, reporting and analysis. The smooth integration of the product with Quality Center means that users don't have to learn new skills in order to use it.

- Enables Quality Center to access the automation capabilities of VersaTest
- Enables new categories of enterprise mainframe testing to be achieved from Quality Center
- Standardized testing approach
- Leverages the "look and feel" of Quality Center
- No new skills required as it works within Quality Center

Product Overview

The VersaTest Automation Server Plugin for HP Quality Center Software (VTAQC) provides a bridge between VersaTest Automator and HP Quality Center. This enables testing definitions and execution to occur within Quality Center, providing automation validation, feedback of results, and pass/fail criteria.

VTAQC automatically creates central management, visibility, and a repository of tests and test results. This includes automatic auditing/storage of all VersaTest results files enabling rapid access and audit trail of tests conducted.

Using the VersaTest Engine to do More

The VersaTest Automation Server Plugin for HP Quality Center Software connects the market leading message based automated testing engine, VersaTest, with the premier enterprise quality management solution, HP Quality Center, enabling true test automation via a single tool.

Platform Support

VersaTest Automator will run on any platform which supports the Java Runtime Environment. This includes, Windows platforms, Linux, AIX, Sun Solaris and HP NonStop Servers.

The VersaTest Automation Server Plugin for HP Quality Center Software has successfully completed HP Software's Interoperability testing, and supports all installation platforms supported by Quality Center
