

Testing tools are often purchased to address a specific testing issue or for use by a specific group within a larger organization. This can result in underutilization of the tool's capabilities and consequently a reduced return on the investment made in the tool.

- Address new functional areas such as unit, regression or stress testing
- Reduce reliance on external entities such as foreign hosts and interchanges
- Share cost of ownership by identifying others groups in your organization that could benefit from the use of our tools

The duration, scope and deliverables for engagements of this type are based on your requirements.

Training

Initial training often includes only the people required to support the specific areas where tools are first deployed. Expanding the use of existing tools by training additional users increases the benefits of owning the tool at very little additional cost. Available training courses include:

- Introduction to VersaTest
- VersaTest Advanced Scripting
- Relate Usage
- Introduction to TestPilot

Classes may be combined as needed for your environment and can be conducted at your site or in our offices in Sausalito, CA, USA or London, England.

Overview

Ascert realizes that in many cases our software testing tools are purchased to address a specific, testing requirement or to support the needs of a specific testing group. We believe that, in many cases, this view of our tools as a "point solution" prevents you from gaining the maximum benefit of the flexibility and functionality built into our tools. As a valued customer, we want to help ensure that you achieve maximum return on your investment and realize the full benefits our products can provide in your environment. Our professional service offerings can help you identify new ways to use our tools that will further enhance your testing capabilities.

Expanded Usage

Our experienced testing consultants can help you identify additional areas in your organization where the expanded use of our tools would provide additional benefits:

Key Features

- Fill temporary, shot-term staffing requirements
- Identify additional uses for Ascert testing tools
- Maximize return on investment
- Provides additional testing expertise and tool usage knowledge
- Fills short term personnel requirements for specific testing tasks
- Helps you achieve maximum return on your investment

Consulting Services

Our years of experience in software testing provide us with unique capabilities and allow us to provide you with exactly the custom services you require.

- Stress Test design and execution
- Custom VersaTest script development
- TestPilot Implementation support
- Staff augmentation for limited term special projects

Background

Ascert Professional Services has built a reputation for providing high quality services based on our many years of providing implementation, training and

business partner

custom consulting services to our clients. We believe that one of the most important reasons for this success is our commitment to working with you to identify and address the issues that are important in your environment rather than trying to impose our own approach or philosophy.

We will be happy work with you to design a personalized engagement that meets your needs. Duration and cost of each engagement vary depending on your requirements and preferences
